

# What's New in eSYSCO!

The release of eSYSCO® v7.4.9 has many new features, including new messages, options, and fields. With our customers in mind, SYSCO frequently updates eSYSCO to continue improving its functionality to meet our customers needs. The new items available in the latest version of eSYSCO are highlighted in this document. Refer to the online help file or user guides for more details.

## New Features

**New Brand Grade field added.** The GRD column was added to all item list screens. The GRD column displays the grade level of the SYSCO brand product. Currently, only Arezzio® products have entries in the GRD column. SYSCO Brand Grade codes are:

- I** Imperial
- S** Supreme
- C** Classic
- R** Reliance

**Ability to import and export information to a spreadsheet.** You can now use import/export Option 6 to maintain orders and custom lists offline using Microsoft Excel or other spreadsheet software program. It provides the ability to import/export a custom list or order to a comma-separated value (.csv) file. Once updated, the custom list or order spreadsheet can be imported to eSYSCO.

**Seasonal inactive items stay on custom lists.** Seasonal items with inactive SYSCO item numbers may be maintained on a custom list, even though the product may not be available at this time. This allows you to keep the products on your custom lists the same, even if the item is only available during certain times of the year.

**Custom lists may be sorted by SYSCO category.** To provide an additional sorting method to the custom list display, you can now sort by SYSCO category.

**Custom lists can be replaced with new list.** With the new import Option 6, you can maintain custom lists in a spreadsheet and replace the custom list currently stored in eSYSCO. When replacing a list, it can have the same list name with different items, same items with a different name, or same list name, same items, different default quantities.

## Multi-Buyer and Multi-Approver

**Multi-Buyer able to search in multiple order guides.** A new feature for Multi-Buyers allows them to perform an advanced search in the order guides for their assigned customer accounts without having to logout and login using a different user name.

## Inventory and Menu Analysis

**Message displays when submitting a Non-SYSCO order through Inventory module.** When attempting to submit a non-SYSCO order created in the Inventory module, a message displays reminding you only SYSCO orders may be submitted through eSYSCO. You must contact other distributors manually.

**Supplier Setup validation added.** When adding supplier detail to the Supplier Setup screen, certain information is now verified for proper formatting. This information includes, email address, state, zip code, phone number, and fax number. Supplier details are optional. If entered, the details must meet basic format standards, such as customer@email.com or including an area code for phone and numbers.

**Supplier Notes allow up to 200 characters.** When adding notes to the Supplier details, you can have up to 200 characters. If more than 200 characters are added, a message displays stating only 200 characters are allowed.

## Basic System Enhancements

**SYSCO support email link added to Customer Support screen.** The Customer Support screen now displays a link that allows you to send an email directly to your SYSCO Operating Company (OpCo) support team. When problems or questions arise, simply click the link to send an email directly to SYSCO.

**Login Warning message displays in red.** To help emphasize the warning message that may appear when you log into eSYSCO, the text now displays in red.
